In, On, At - Dominoes

Divide the students into pairs. Divide the dominoes out equally. One student places a domino in front of them, and the other student has to match the preposition with a time expression by placing one of his or her dominoes at either end of the first domino. The students continue taking it in turns to place dominoes until one student has no dominoes left. This student is the winner. If a student puts down a domino that is incorrect, they must pick up their card and miss a turn. If a student cannot go, they pass to the other student.
